

### ❖ Potential Energy Diagrams: Transition States and Intermediates

The potential energy diagrams or the reaction progress curves are nothing but a visual representation of the energy changes that occur during a chemical reaction. The energy of various species participating in the reaction is plotted on the  $y$ -axis (ordinate) whereas the progress of the reaction on the  $x$ -axis (abscissa). Now since a reaction can have transition states and intermediates (in addition to the reactants and final product), we must discuss the corresponding potential energy diagrams.

#### ➤ Potential energy Diagram of Reactions with Reactant, Product and Transition State

The transition state of an organic reaction is a specific configuration along the reaction coordinate and corresponds to the highest potential energy along with this reaction coordinate. Furthermore, the transition state is not an actual molecule that can be isolated, and therefore it is often marked with the double dagger or star symbol to differentiate. The typical potential energy diagrams of endothermic and exothermic reactions with reactants, products, and transition states are shown below.

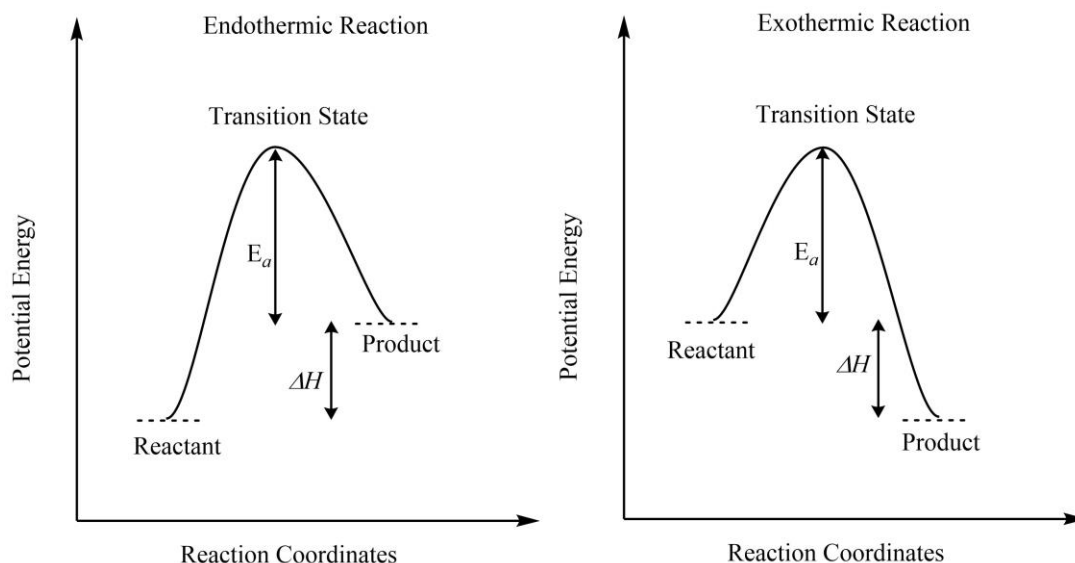

Figure 7. Typical potential energy curves for exothermic and endothermic reactions.

It is obvious from the potential energy diagrams that the enthalpy change is positive for an endothermic reaction ( $\Delta H > 0$ ) and negative for an exothermic reaction ( $\Delta H < 0$ ). For exothermic reactions, the potential energy of the reacting species first increases, attains a maximum at the transition state, and then decreases even more than the reactants. For endothermic reactions, the potential energy of the reacting species first increases, attains a maximum at the transition state, and then decreases less than the reactants.

Furthermore, it should also be noted that the energy gap between the transition state and reactant is the activation energy ( $E_a$ ) which is responsible for the speed of the reaction. The higher activation energy leads to slow transformation and vice-versa.

➤ **Potential energy Diagram of Reactions with Reactant, Product, Transition State, and Intermediates**

The chemical species that are formed somewhere during the course of a chemical reaction are called as reaction intermediates. Unlike transition states, these are actual molecules that are short-lived and unstable. Sometimes they are called temporary reactants or products because they are neither present in actual reactants nor the actual products. The typical potential energy diagram of a typical exothermic reaction with a reactant, product, intermediate, and transition state is shown below.

Figure 8. Potential energy diagram for the  $S_N1$  reaction.

It is obvious from the potential energy diagrams that the intermediates are situated at the minima whereas the transition states are shown at the maxima. Also, just like the previous case, the energy gap between the transition state and reactant is the activation energy ( $E_a$ ) which is responsible for the speed of the reaction i.e. the higher activation energy leads to slow transformation and vice-versa.

Reaction coordinate diagrams also give information about the equilibrium between a reactant or a product and an intermediate. If the barrier energy for going from intermediate to product is much higher than the one for the reactant to intermediate transition, it can be safely concluded that a complete equilibrium is established between the reactant and intermediate. Nevertheless, if the reactant-to-intermediate barrier is almost equal in energy to intermediate-to-product change, then no full equilibrium is set and steady-state approximation becomes activated to dictate the kinetic rate expressions.

International  
Edition

# A TEXTBOOK OF ORGANIC CHEMISTRY

**Volume I**

**MANDEEP DALAL**

*First Edition*

**DALAL INSTITUTE**

# Table of Contents

<b>CHAPTER 1</b> .....	<b>11</b>
<b>Nature of Bonding in Organic Molecules</b> .....	<b>11</b>
❖ Delocalized Chemical Bonding .....	11
❖ Conjugation .....	14
❖ Cross Conjugation .....	16
❖ Resonance .....	18
❖ Hyperconjugation .....	27
❖ Tautomerism .....	31
❖ Aromaticity in Benzenoid and Nonbenzenoid Compounds .....	33
❖ Alternant and Non-Alternant Hydrocarbons .....	35
❖ Huckel's Rule: Energy Level of $\pi$ -Molecular Orbitals .....	37
❖ Annulenes .....	44
❖ Antiaromaticity .....	46
❖ Homoaromaticity .....	48
❖ PMO Approach .....	50
❖ Bonds Weaker Than Covalent .....	58
❖ Addition Compounds: Crown Ether Complexes and Cryptands, Inclusion Compounds, Cyclodextrins .....	65
❖ Catenanes and Rotaxanes .....	75
❖ Problems .....	79
❖ Bibliography .....	80
<b>CHAPTER 2</b> .....	<b>81</b>
<b>Stereochemistry</b> .....	<b>81</b>
❖ Chirality .....	81
❖ Elements of Symmetry .....	86
❖ Molecules with More Than One Chiral Centre: Diastereomerism .....	90
❖ Determination of Relative and Absolute Configuration (Octant Rule Excluded) with Special Reference to Lactic Acid, Alanine & Mandelic Acid .....	92
❖ Methods of Resolution .....	102
❖ Optical Purity .....	104
❖ Prochirality .....	105
❖ Enantiotopic and Diastereotopic Atoms, Groups and Faces .....	107
❖ Asymmetric Synthesis: Cram's Rule and Its Modifications, Prelog's Rule .....	113
❖ Conformational Analysis of Cycloalkanes (Upto Six Membered Rings) .....	116
❖ Decalins .....	122
❖ Conformations of Sugars .....	126
❖ Optical Activity in Absence of Chiral Carbon (Biphenyls, Allenes and Spiranes) .....	132
❖ Chirality Due to Helical Shape .....	137
❖ Geometrical Isomerism in Alkenes and Oximes .....	140
❖ Methods of Determining the Configuration .....	146

❖ Problems.....	151
❖ Bibliography.....	152
<b>CHAPTER 3.....</b>	<b>153</b>
<b>Reaction Mechanism: Structure and Reactivity .....</b>	<b>153</b>
❖ Types of Mechanisms.....	153
❖ Types of Reactions .....	156
❖ Thermodynamic and Kinetic Requirements.....	159
❖ Kinetic and Thermodynamic Control .....	161
❖ Hammond's Postulate.....	163
❖ Curtin-Hammett Principle .....	164
❖ Potential Energy Diagrams: Transition States and Intermediates .....	166
❖ Methods of Determining Mechanisms.....	168
❖ Isotope Effects .....	172
❖ Hard and Soft Acids and Bases.....	174
❖ Generation, Structure, Stability and Reactivity of Carbocations, Carbanions, Free Radicals, Carbenes and Nitrenes.....	176
❖ Effect of Structure on Reactivity .....	200
❖ The Hammett Equation and Linear Free Energy Relationship.....	203
❖ Substituent and Reaction Constants.....	209
❖ Taft Equation.....	215
❖ Problems.....	219
❖ Bibliography.....	220
<b>CHAPTER 4.....</b>	<b>221</b>
<b>Carbohydrates .....</b>	<b>221</b>
❖ Types of Naturally Occurring Sugars .....	221
❖ Deoxy Sugars .....	227
❖ Amino Sugars.....	229
❖ Branch Chain Sugars .....	230
❖ General Methods of Determination of Structure and Ring Size of Sugars with Particular Reference to Maltose, Lactose, Sucrose, Starch and Cellulose.....	231
❖ Problems.....	239
❖ Bibliography.....	240
<b>CHAPTER 5.....</b>	<b>241</b>
<b>Natural and Synthetic Dyes .....</b>	<b>241</b>
❖ Various Classes of Synthetic Dyes Including Heterocyclic Dyes .....	241
❖ Interaction Between Dyes and Fibers .....	245
❖ Structure Elucidation of Indigo and Alizarin .....	247
❖ Problems.....	252
❖ Bibliography.....	253
<b>CHAPTER 6.....</b>	<b>254</b>
<b>Aliphatic Nucleophilic Substitution .....</b>	<b>254</b>
❖ The $S_N2$ , $S_N1$ , Mixed $S_N1$ and $S_N2$ , $S_Ni$ , $S_N1'$ , $S_N2'$ , $S_Ni'$ and SET Mechanisms.....	254

❖ The Neighbouring Group Mechanisms.....	263
❖ Neighbouring Group Participation by $\pi$ and $\sigma$ Bonds .....	265
❖ Anchimeric Assistance .....	269
❖ Classical and Nonclassical Carbocations .....	272
❖ Phenonium Ions.....	283
❖ Common Carbocation Rearrangements.....	284
❖ Applications of NMR Spectroscopy in the Detection of Carbocations .....	286
❖ Reactivity – Effects of Substrate Structure, Attacking Nucleophile, Leaving Group and Reaction Medium .....	288
❖ Ambident Nucleophiles and Regioselectivity .....	294
❖ Phase Transfer Catalysis.....	297
❖ Problems.....	300
❖ Bibliography .....	301
<b>CHAPTER 7 .....</b>	<b>302</b>
<b>Aliphatic Electrophilic Substitution .....</b>	<b>302</b>
❖ Bimolecular Mechanisms – $SE_2$ and $SE_i$ .....	302
❖ The $SE_1$ Mechanism .....	305
❖ Electrophilic Substitution Accompanied by Double Bond Shifts .....	307
❖ Effect of Substrates, Leaving Group and the Solvent Polarity on the Reactivity .....	308
❖ Problems.....	310
❖ Bibliography .....	311
<b>CHAPTER 8 .....</b>	<b>312</b>
<b>Aromatic Electrophilic Substitution .....</b>	<b>312</b>
❖ The Arenium Ion Mechanism.....	312
❖ Orientation and Reactivity .....	314
❖ Energy Profile Diagrams .....	316
❖ The Ortho/Para Ratio.....	317
❖ <i>ipso</i> -Attack .....	319
❖ Orientation in Other Ring Systems .....	320
❖ Quantitative Treatment of Reactivity in Substrates and Electrophiles .....	321
❖ Diazonium Coupling.....	325
❖ Vilsmeier Reaction .....	326
❖ Gattermann-Koch Reaction .....	327
❖ Problems.....	329
❖ Bibliography .....	330
<b>CHAPTER 9 .....</b>	<b>331</b>
<b>Aromatic Nucleophilic Substitution .....</b>	<b>331</b>
❖ The $ArSN_1$ , $ArSN_2$ , Benzyne and $S_RN_1$ Mechanisms.....	331
❖ Reactivity – Effect of Substrate Structure, Leaving Group and Attacking Nucleophile.....	336
❖ The von Richter, Sommelet-Hauser, and Smiles Rearrangements .....	339
❖ Problems.....	343
❖ Bibliography .....	344

<b>CHAPTER 10</b> .....	<b>345</b>
<b>Elimination Reactions</b> .....	345
❖ The E <sub>2</sub> , E <sub>1</sub> and E <sub>1</sub> CB Mechanisms .....	345
❖ Orientation of the Double Bond.....	348
❖ Reactivity – Effects of Substrate Structures, Attacking Base, the Leaving Group and The Medium .....	352
❖ Mechanism and Orientation in Pyrolytic Elimination.....	355
❖ Problems.....	358
❖ Bibliography.....	359
<b>CHAPTER 11</b> .....	<b>360</b>
<b>Addition to Carbon-Carbon Multiple Bonds</b> .....	360
❖ Mechanistic and Stereochemical Aspects of Addition Reactions Involving Electrophiles, Nucleophiles and Free Radicals.....	360
❖ Regio- and Chemoselectivity: Orientation and Reactivity .....	370
❖ Addition to Cyclopropane Ring .....	374
❖ Hydrogenation of Double and Triple Bonds .....	375
❖ Hydrogenation of Aromatic Rings.....	377
❖ Hydroboration .....	378
❖ Michael Reaction.....	379
❖ Sharpless Asymmetric Epoxidation .....	380
❖ Problems.....	382
❖ Bibliography .....	383
<b>CHAPTER 12</b> .....	<b>384</b>
<b>Addition to Carbon-Hetero Multiple Bonds</b> .....	384
❖ Mechanism of Metal Hydride Reduction of Saturated and Unsaturated Carbonyl Compounds, Acids, Esters and Nitriles .....	384
❖ Addition of Grignard Reagents, Organozinc and Organolithium Reagents to Carbonyl and Unsaturated Carbonyl Compounds.....	400
❖ Wittig Reaction.....	406
❖ Mechanism of Condensation Reactions Involving Enolates: Aldol, Knoevenagel, Claisen, Mannich, Benzoin, Perkin and Stobbe Reactions .....	411
❖ Hydrolysis of Esters and Amides.....	433
❖ Ammonolysis of Esters.....	437
❖ Problems.....	439
❖ Bibliography.....	440
<b>INDEX</b> .....	<b>441</b>

*Mandeep Dalal*

*(M.Sc, Ph.D, CSIR UGC – NET JRF, IIT-GATE)*

*Founder & Educator, Dalal Institute*

*E-Mail: dr.mandeep.dalal@gmail.com*

*www.mandeepdalal.com*

Mandeep Dalal is an Indian research scholar who is primarily working in the field of Science and Philosophy. He received his Ph.D in Chemistry from Maharshi Dayanand University, Rohtak, in 2018. He is also the Founder of "Dalal Institute" (India's best coaching centre for academic and competitive chemistry exams), the organization that is committed to revolutionize the field of school-level and higher education in Chemistry across the globe. He has published more than 40 research papers in various international scientific journals, including mostly from Elsevier (USA), IOP (UK), and Springer (Netherlands).
